1. Definition of the software

TOMO 2 is a software package for deriving the three dimensional (3D) state of the troposphere based on integrated measurements of Global Navigation Satellite System (GNSS) phase signal delay. The software is able to process real and simulated data, including Numerical Weather Prediction (NWP) model outputs. Full uncertainty information for the outputs is provided. The Software is composed of Matlab functions and script files and can work in two modes: constrained and unconstrained.

For details see:

Rohm W., Bosy J., The verification of GNSS tropospheric tomography model in a mountainous area, *Advances in Space Research*, Volume 47, Issue 10, 17 May 2011, Pages 1721-1730, ISSN 0273-1177, 10.1016/j.asr.2010.04.017.
